A PROJECT REPORT

ON

"E-book store web app"

SUBMITTED IN PARTIAL FULLFILLMENT OF THE REQUIREMENTS FOR THE AWARD OF

DIPLOMA IN COMPUTER ENGINEEERING

SUBMITTED TO

GOVERNMENT POLYTECHNIC JINTUR

MAHARASHTRA STATE BOARD OF TECHNICAL EDUCATION, MUMBAI

SUBMITTED BY

Name of Student	Enrollment No.
JYOTI MADHUKAR JADHAV	23510240130
SHITAL RAJABHAU JADHAV	23510240132
GAYATRI MADHAV MORE	23510240143
MAYURI LAXMAN NARSALE	23510240145

GUIDED BY
PROF._M.A.Zahed
(Lecturer In Computer Engineering)

GOVERNMENT POLYTECHNIC JINTUR DISTRICT

PARBHANI STATE – MAHARASHTRA

Academic year 2025-26

GOVERNMENT POLYTECHNIC JINTUR
DISTRICT - PARBHANI

CERTIFICATE

This is to certify that the project report entitled **"E-book store webapp"** was successfully completed by student of sixth semester Diploma in computer Engineering.

Roll No	Name of group members	Enrollment No	Seat Number
319	Jyoti Madhukar Jadhav	23510240130	423932
321	Shital Rajabhau Jadhav	23510240132	423934
327	Gayatri Madhav More	23510240143	423940
328	Mayuri Laxman Narsale	23510240145	423941

In partial fulfillment of the requirements for the award of the Diploma in Computer Engineering and submitted to the Department of Computer Engineering of Government Polytechnic Jintur. Work carried out during a period for the academic year 2025-2026 as per curriculum.

(Prof.M.A.Zahed)
Project Guide

(Prof.R.D.Kokre)
Head Of Department

External Examiner

(Mr. G.A.Kanade)
Principal

ACKNOWLEDGMENT

This project is done as a capstone project as a part course title **"E-book store web app"** We are really thankful to our Mr.G.A.Kanade sir, Principal and R.D.Kokre Sir Head of Department, Department of Computer Engineering, Government Polytechnic Jintur for his valuable guidance and assistance, without which the accomplishment of the task would have never been possible. We also thank M.A.Zahed Sir for giving this opportunity to explore into the real world and realize the interrelation, without which a Project can never progress. We are also thankful to our supporting staff of computer department, parents, and friends for providing us relevant information and necessary clarifications, and great support.

Name of the candidate	**Signature**
Jyoti Madhukar Jadhav	…….
Shital Rajabhau Jadhav	…….
Gayatri Madhav More	…….
Mayuri Laxman Narsale	…….

ABSTRACT

This project involves the development of a hotel management system using the Python programming language. The system is designed to help hotel managers streamline their operations, increase efficiency, and improve customer service. The system includes modules for managing reservations, room assignments, guest information, and billing. The system also includes a reporting module that provides management with real-time insights into hotel occupancy rates, revenue, and guest satisfaction. The project is implemented using object-oriented programming principles, and it incorporates a graphical user interface to make it easy for hotel staff to use. The hotel management system is expected to improve the overall efficiency and profitability of the hotel, while also enhancing the guest experience.

TABLE OF CONTENTS

1. INTRODUCTION

1.1 _____Browse a Wide Range of E-Books 8
1.2 _____ Make Secure Purchases 9
1.3 _____Download and Read Books 10
1.4 _____Book Recommendations and Reviews 11

2. LITERATURE SURVEY

2.1 _____ Limited Personalization 13
2.2 _____Device Compatibility Issues 15
2.3 _____Complicated User Interfaces 16
2.4 _____Limited Payment Methods 19

3. SCOPE OF THE PROJECT

3.1 _____ Online shopping web sites for retail sales direct to consumers. 24
3.2 _____Business-to-businees Buying and Selling 24
3.3 _____Gathering and using demographic data through web contacts 26_
3.4_____Marketing to prospective and established customers by e-mail 28

4. METHODOLOGY

4.1 _____ Requirement Analysis 31
4.2 _____ Design Phase 31
4.3 _____Development Phase 32
4.4 _____ Testing Phase 35
4.4 _____ Deployment Phase _36
4.5 _____ Maintenance & Updates 37

5. DETAILS DESIGN & WORKING PROCESS

5.1 _____User Interface Design 39
5.2 _____Webapp Mechanics 39
5.3 _____Technology Stack

6. SYSTEM DESIGN
6.1_____E-Book Management System 40
6.2_____Login Page 41

7.RESULT & APPLICATIONS: The web application successfully integrates multiple books into as multiple platform 42
8.CONCLUSION & FUTURE SCOPE: The e book store web app provides a robust platform for users to easily browse , purchase and download E-books in seamless and secure manner 43

Chapter One:

1.1 INTRODUCTION

The digital transformation of the book industry has revolutionized how people consume literature and educational materials. E-books, in particular, have emerged as a highly convenient and accessible way for readers to access a wide variety of content. An E-Book Store WebApp aims to provide a seamless platform for users to browse, purchase, and download ebooks across multiple genres, including fiction, non-fiction, educational, and more. The goal of this capstone project is to design and develop a fully functional and user-friendly web application that not only facilitates e-book transactions but also offers additional features like book recommendations, user reviews, and integration with multiple payment systems.
This project will focus on delivering an intuitive, responsive, and secure e-book store that enhances the reading experience by leveraging the power of modern web technologies. It will enable users to:
1.1: Browse a Wide Range of E-Books: Users can explore a large catalog of books, sorted by genre, popularity, or recent releases.
1.2 : Make Secure Purchases: The platform will feature integration with reliable payment gateways for easy and secure transactions.
1.3: Download and Read Books: After purchasing, users can easily download e- books in multiple formats compatible with various devices and reading platforms.
1.4: Book Recommendations and Reviews: Personalized recommendations based on user preferences and ratings, as well as user-generated reviews to help other buyers make informed decisions.
1.5: Account Management: Users can create accounts to track purchase history, manage downloaded content, and customize their reading preferences.

Chapter Two:

2.2 LITERATURE SURVEY

An E-Book Store Web Application involves reviewing and summarizing existing research, technologies, and trends in the domain of e-book stores, digital content distribution, and web app development. This can include studies on user preferences, security features, payment integration, data management, and the latest trends in e-commerce and web app design.
Existing Systems: Currently, many mobile applications focus on individual games like Tic-Tac-Toe, Chess, or Snake Game. While these apps offer quality gameplay, they lack variety, forcing users to install multiple applications to enjoy different games.
Problem Identification:
From the insights gathered, several core problems can be identified that the proposed E-Book Store WebApp seeks to solve:
2.1: Limited Personalization: Most platforms offer limited or generic recommendations, making it harder for users to find books that match their unique tastes and preferences.
2.2: Device Compatibility Issues: Proprietary formats (such as AZW) restrict cross-platform and cross-device usage, creating friction for users who want to access their books on multiple devices.
2.3: Complicated User Interfaces: Many e-book platforms are difficult to navigate, particularly for new users or those unfamiliar with digital books. A streamlined, user-friendly interface is essential to ensure that users can quickly browse and make purchases.
2.4: Limited Payment Methods: A lack of support for diverse payment options, especially in international markets, reduces the accessibility and inclusivity of existing platforms.
2.5Discovery Challenges: Despite large book catalogs, many platforms struggle with discoverability. Effective search tools, personalized recommendations, and advanced filtering options are essential for helping users find books that align with their interests.

Chapter Three:

3.3 Scope of the Project

The primary objective of the E-Book Store Webapp is to provide users with a platform to browse, purchase, and download digital e-books. The platform aims to offer a seamless and user-friendly experience for readers and publishers while addressing the needs of both.

3.1: Online shopping web sites for retail sales direct to consumers.

3.2: Providing or participation in online marketplaces, which process third- party business-to-consumers or consumers-to-consumers sales.

3.3: Business-to-business buying and selling.

3.4: Gathering and using demographic data through web contacts

3.5: Business-to-business electronic data interchange.

3.6: Marketing to prospective and established customers by e-mail

3.6: Engaging in partial for launching new products and services.

Chapter Four:

4.4 Methodology

The development process follows the Agile methodology, which allows continuous improvements and feedback integration. The steps include:

4.1: Requirement Analysis: Identifying key features and user needs.
4.2: Design Phase: Creating Frontend for E-Book store webapp.
4.3: Development Phase: Coding the Webapp for E-Book store using Java and designing the interface using html and Css.
4.4: Testing Phase: Conducting unit testing, UI testing, and gathering user feedback.
4.5: Deployment Phase: Releasing the application for Android users.
4.6: Maintenance & Updates: Fixing bugs, improving performance, and adding new features over time.

Chapter 5:

5.5 Details of Design, Working, and Processes

5.1: User Interface Design:
1. Home Page: The landing page of the e-book store displays a clean, visually appealing layout with sections for featured e-books, new arrivals, bestsellers, and promotional offers. A prominent search bar at the top allows users to quickly find specific e-books by title, author, or genre.
2. Category and Genre Pages: Separate pages for various genres (e.g., Fiction, Non- fiction, Science, Romance) are designed to make browsing easy. Each category page contains filters such as price range, ratings, and publication date, enabling users to refine their search and find the perfect e-book.
3. Product Detail Pages: Each e-book has its own product page with essential information, including the title, author.

5.2: Webapp Mechanics:

o User Authentication: User can login on website of e-book.
o E-book Browsing: The e-book store showcases a wide variety of books across different categories, such as Fiction, Non-fiction, Mystery, Romance, and more. o Shopping Cart and Checkout: Users can add e-books to their shopping cart, review selected books.
o Order Confirmation and Download: Increasing difficulty levels with progressive speed. o Brick Breaker: Multiple levels with different challenges. o Rock-Paper-Scissors: AI-based opponent for single-player mode.

5.3: Technology Stack:

o Programming Language: Java o UI Development: CSS o Backend (optional): (Sql) Workbench, Java,Tomcat.springboot

Chapter Six:

6.6 SYSTEM DESIGN

6.1 Home Page

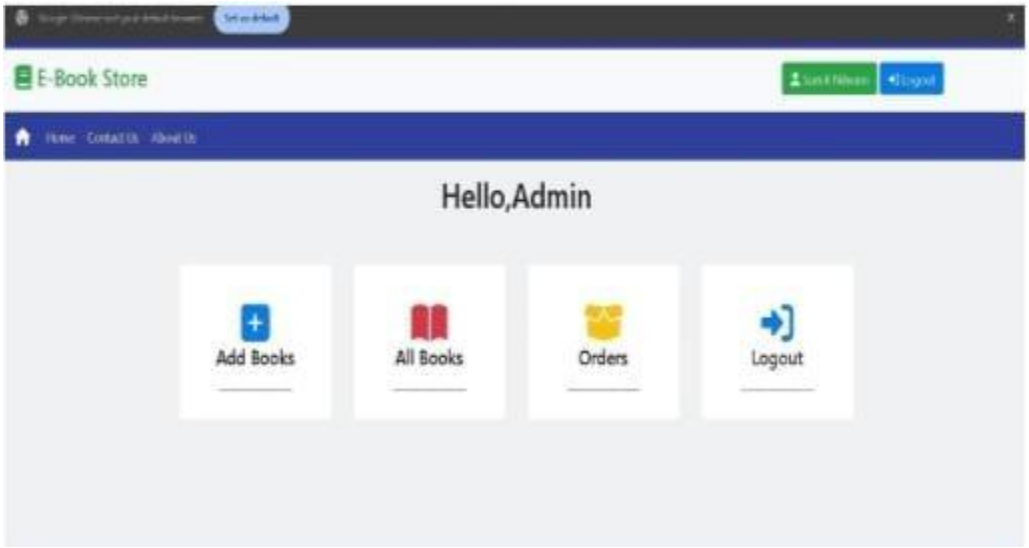
The image shows a computer or laptop screen displaying a Book Management System web application. The webpage has a clean, simple layout with a navigation bar at the top that includes options like Home, View Books, Add Book, Setting, and Contact Us.

In the center of the page, there is a large banner section with a blurred background image of bookshelves, giving a library-like appearance. Over this banner, the title “Book Management System” is clearly visible.

Below the banner, there is a section titled “Recent Book”, where small book cover images or thumbnails are displayed, representing recently added or available books.

Overall, the image represents an online library or book store interface designed to manage, view, and organize books digitally.

6.2 Login Page



The Design shows an Admin Dashboard page of an online Book Store / Book Management System displayed on a computer screen. At the top, there is a navigation bar with menu options such as Home, Contact, and About Us, along with buttons like Edit Profile and Logout on the right side.

In the center of the page, a welcome message “Hello, Admin” is displayed, indicating that the administrator is logged into the system. Below this message, four main dashboard options are shown as icons:

Add Books – used to add new books to the system

All Books – used to view and manage all available books

Orders – used to check customer orders

Logout – used to safely exit the admin account
Overall, the image represents a simple and user-friendly admin control panel designed to manage books and orders in a digital book store system.

Chapter Seven:

7.Results and Applications

• The Web application successfully integrates multiple Books into as Multiple platform.
• Users can Purchase the Books from Store.
• A smooth UI enhances the User experience.
• The Web app can be used for Purchasing books, Oredring books etc..

Chapter Eight:

8.Conclusion and Future Scope

The E-Book Store Webapp provides a robust platform for users to easily browse, purchase, and download e-books in a seamless and secure manner. With its user-friendly interface, personalized recommendations, and integrated payment gateways, the platform offers an excellent e- commerce experience. The webapp also ensures data security through encryption and optional two-factor authentication, protecting users' personal and financial information. Instant access to e-books in multiple formats allows for a flexible reading.
